

*Application and desktop delivery  
has never been so simple*

## AppliDis Fusion 4

Application and desktop virtualisation

Stancia's AppliDis Fusion 4 brings a new approach to the market, offering a quick and easy way to publish and virtualise applications and desktops anywhere and at any time using a simple web based console.

AppliDis Fusion 4 is application transparent, meaning it can manage and virtualise all applications and desktops and can be easily integrated into all existing architectures.

This makes AppliDis Fusion 4 the ideal solution for organisations who are looking at ways to reduce IT operational and management costs, whilst enabling IT administrators to deliver a better quality of service to users.

## One console to deliver applications and desktops as a service

AppliDis Fusion 4 can deliver applications and desktops as a service: a single web console enables administrators to manage servers, applications, software licenses and access permissions, as well as create and manage virtual machines hosting a variety of operating systems which can all be delivered to hundreds of users across the enterprise with a single mouse click.

AppliDis Fusion 4 administration console

## Integrate virtualisation easily into your architecture

AppliDis Fusion 4 can be easily integrated into existing architectures as it works with all server environments and is compatible with all existing hypervisors. AppliDis Fusion 4 is application transparent, meaning it can manage and virtualise all Windows applications and desktops (including Microsoft Windows 7) regardless of connectivity, graphics card and operating system requirements.

## Give users Web 2.0 experience

With AppliDis Fusion 4, the user experience in the virtualised environment is a major priority. Rich media components such as video streaming, flash animation and high quality bi-directional audio are all automatically catered for. External peripherals are recognised as soon as they are plugged in using the standard manufactures supported drivers. Furthermore using the additional functionality of AppliDis MyApps™, you can quickly create your own application catalogue and offer network users a Web 2.0 browser based collaborative tool.

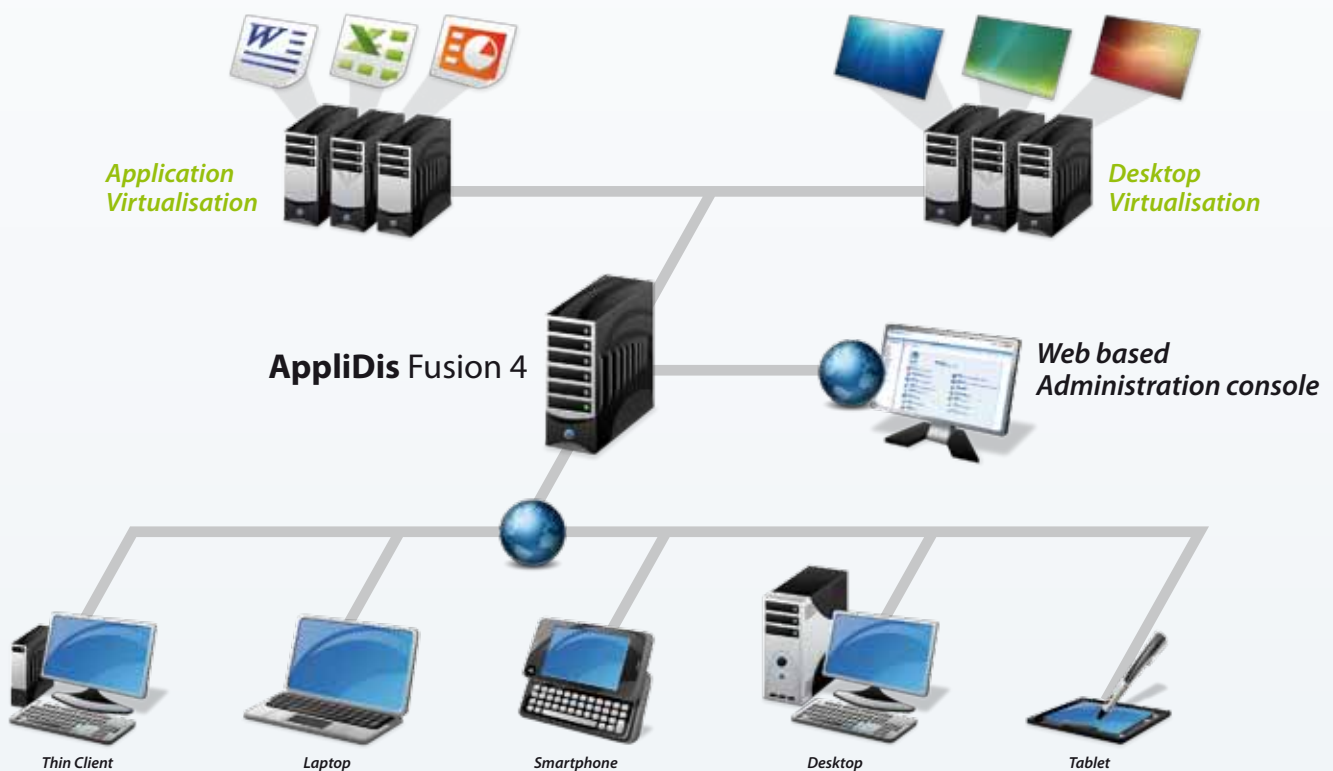

## Simplify day-to-day administration

To simplify deployment, AppliDis Fusion 4 provides you with a comprehensive technical toolbox. With the AppliDis ToolBox, you will have access to a number of system tools that allow the virtualisation of individual registry keys (for each application), file access virtualisation and identification virtualisation (hostname, IP address...), plus many more.

## Architecture

As the global solution for virtualising applications and desktops, AppliDis Fusion 4 allows you to manage and virtualise all Windows applications and desktops within the data centre, whether it is located within the company or hosted by a third-party. AppliDis Fusion is also the most suitable solution for organisations looking at public or private cloud computing as well as SAAS (Software-As-A-Service) solutions. AppliDis Fusion 4 is based on the RDP protocol (including version 7), within Windows Remote Desktop Services (formerly Windows TS) and is fully compatible with current hypervisors technologies. AppliDis Fusion 4 includes all the required components to fully master user environments.

- **Virtualise** all Windows applications and desktops

*AppliDis Fusion 4 is application transparent, meaning it can manage and virtualise all Windows applications and desktops. Virtualised desktops can work with any Windows operating system: XP, Vista, Seven, or under Windows RDS.*

- **Full interoperability** with all server virtualisation solutions

*AppliDis Fusion 4 works with every server environment and with all current virtual hypervisors technologies. No need to change or transform your existing IT ecosystem.*

- **Intelligent usage detection** system & intelligent load balancing

*The Intelligent Load Balancing included in AppliDis Fusion 4 is based on an application usage detection technology. It learns how applications and desktops are used over time, and balances resource requirements accordingly.*

- **Integrated Universal Printing Module**

*AppliDis Fusion 4 supports all types of printer, local or distant and avoids the issues of multiple printer support, driver mismatch and bandwidth constraints in an SBC and VDI environment. It provides compression features that reduce the size of print files from application servers to local printers.*

- **Management and support for hardware** such as scanners and cameras

*AppliDis Fusion 4 brings you management and support for hardware such as scanners and cameras connected into applications and virtual desktops (twain standard). External peripherals are instantly recognised within the application or desktop as soon as they are plugged in.*

## Why choose AppliDis Fusion 4

- Benefit from the unique integrated approach of the solution
- Administer all centralised resources via a single web console
- Deliver applications and desktops anywhere and at any time
- Deliver secure media-rich desktops and applications to your users
- Protect your existing IT investment by using a standards based solution which works in every environment
- Detect and anticipate users' requirements in real time
- Enhance application security to help safeguard machine data and user information
- Reduce server and desktop management costs

## AppliDis Fusion 4 Customer Quotes

*"We have deployed our "AppliDis" solution over several years and have been very satisfied with its ability to publish applications. Today our users can access the published applications in total security and benefit from the system's high reliability."*

■ **Department of Employment, France - M.P. Louet** - Director, Thin Client and Specific Solutions.

*"We use mobile devices to access patient information directly at their bed. The AppliDis solution from Systancia perfectly meets our needs from both a technical and financial point of view. We have installed the AppliDis product on mobile PC's, on trolleys at the hospital, and also on Motion C5 tablet PC's. Doctors and staff have been satisfied with the system since day one."*

■ **Douai Hospital - Philippe Huddlestone** - Deputy Director, IT and Telecoms Division.
