

# Your Desktop, Anywhere!

## TERMINAL SERVER

### Your Issue

- Your IT costs are increasing as you take on more employees.
- More of your PCs are becoming out-dated and require upgrades to run new applications.
- You can't work from home and have access to all your applications and documents, but would like to.
- You are finding it difficult to manage and update applications.

### The Solution

Windows Terminal Server delivers many benefits, including reducing your overall IT costs dramatically.

The software allows you to deliver centralised Windows-based applications and even the Windows desktop itself to virtually any computing device (PC, Thin Client or PDA)—including those that cannot run Windows.

Every user sees their own sessions which are centrally managed on a transparent basis by the server. Applications are only required to be installed once on the server and thereafter are available to employees via remote desktop or a web interface which both run as a standard desktop.

### Features

- Centralised deployment of applications.
- Remote desktop access to individual sessions.
- Applications readily available regardless of PC hardware.
- Allow remote users and branch offices access to applications.
- Web-based interface allowing users to connect through browsers.

### The Benefits

- Work from anywhere—home, branched office, airport lounge etc and access your own desktop as you would in the office.
- No need to upgrade or replace old PCs to run new applications.
- Run Windows-based applications on portable devices, for example PDAs or hand-held devices.
- Compatible with Thin Client technology and devices, which are much cheaper than purchasing new high-end technologies.
- Easily enable remote working from un-trusted locations—software does not need to be installed locally.

### Key Benefits . .

Access your desktop  
anywhere

No need to upgrade old PCs

Easier to maintain software  
packages and security

Thin Client Technology

Software Restriction policies  
for increased productivity
